

TOP SECRET

APPENDIX

State Dept. declassification & release instructions on file

1. According to the Stassen proposals for aerial inspection and ground controls, coverage would be provided:

a) In the USSR north of the Arctic Circle of high priority targets at seven locations (one of these, the Long Range bomber staging base at Severomorsk, is considered to be of the highest priority). These seven locations also include three other targets which are considered important because of their potential for staging long range bomber aircraft; in addition there are two airfields with capabilities for staging nuclear weapons attacks by long range bombers, one installation involved in the Soviet atomic energy program, four places of interest in determining Soviet guided missile capabilities, and three areas of important Soviet naval activity.

b) In the USSR west of 27¹°E longitude and between 42°20'N and 63°N latitudes - high priority targets at fifteen locations (one of these, the Long Range bomber base at Tartu, is considered to be of the highest priority). These fifteen locations have the following implications: in addition to Tartu, two are important Long Range Air bases with nuclear delivery potential; three are known or suspected to have guided missile associations, two are important naval bases and/or shipyards, and nine are key locations for assessing the strength and deployment of Soviet ground forces.

c) In the Soviet Union east of 108°E and south of the Arctic Circle: 63 high priority locations (including the 2 of highest priority).

TOP SECRET

TOP SECRET

Aside from the two locations of highest priority targets--
Komsomolsk, site of important aircraft production and submarine
construction, and Klyuchi, site of some important activity associ- 25X1B
ated with the Soviet ICBM or earth satellite program--targets in
this region of the USSR are, in general, of less importance

2. According to the Stassen proposal for the establishment
of "ground controls" only coverage would provided:

a) In the USSR west of 35°E and south of the Arctic
Circle - 44 locations which contain high priority targets, of which
ten (all Long Range bomber bases) are of the highest priority. 15
others, actual or potential Long Range bomber bases are included
among the 44 high priority targets.

Most of the remaining 19 target locations in the area
subject only to ground controls are military installations of
either naval or ground force association but the area also includes
an important BW installation - Lisiy Island - as well as a few
targets associated with the Soviet nuclear energy and/or guided
missile programs.
